Traffic Trend in Japan

- The MIC in Japan surveys the traffic trend in Japan with major 7 ISPs and IXes.
- The traffic is classified with three that are between ISP and IX as B1, between ISPs as B2, and inbound from and outgoing to outside Japan as B3.

In-bound traffic of the 7 ISPs   Outgoing traffic of the 7 ISPs

cf. Press release of the ministry Internal Affairs and Communications on 27 Jul 2005

JPNAP service overview

- Started in May, 2001
- Located Tokyo and Osaka, JAPAN
- One of the biggest IXs in the world
  - The aggregate traffic of both sites reachs to 77G!
- JPNAP6(IPv6) is also provided

Tokyo

Osaka

500km

Recent topics

- Increase of the number of 10GbE port connections
  - Less than 30 port for more than 10 customers
- LAG connection of GbE ports
- deployment optical switch units
  - They work pretty well
- Launching "PeerWatcher" service in June, 2005 at JPNAP and in Sep., 2005 at JPNAP Osaka.
- Launching IPv4/IPv6 dual stack service in July, 2005 at JPNAP Osaka and in Oct., 2005 at JPNAP.

All communication flows through here.

Optical switch unit

- Detecting failure and automatically switching to backup system by optical monitoring

JPNAP backbone

L2 Switch 1 — main

L2 Switch 2 — backup

Optical switch

ISP router

- Manually switching by remote operators
  - It takes about10ms to switch
  - ISP routers didn't detect "BGP down"
- Power failure of the unit makes no impact for connection between IX and ISP router

All communication flows through here.
