npIX Update, APNIC 18 IX SIG 1 September, 2004 Nadi, Fiji

The locations

- Two switches (about 3 Kms apart)
 - The first operational one at the telecom building
- The main location
 - 3548 high density switch
 - Two route collectors
- The two switches are not connected.... we are still discussing if that should be done.

New ?

- Nepal Telecom has joined
- UPS upgraded
- Route collector functioning since 25 August
- School Leaving Certificate results hosted outside KTM... so only about 2 MB of traffic flow on that day compared to 5 MB last year.
- Other ISPs joining soon, now we have 8.
- You can view routes at <http://lg.pch.net>

Traffic

- Significant increase observed

What next ?

- v6 peering .. We've got the address space now
- Routing Registry
- Root Server anycast
- .np anycast
- Cache share...
