

Difficulty for ERX project in KRNIC

2005. 2. 23

James Shim

KRNIC of
NIDA(National Internet Development Agency of Korea)

Table of Context

- What is ERX?
- ERX status in Korea
- Problems doing ERX in KRNIC
- What is your circumstance?

What is ERX?

□ ERX(Early Registration Transfer)?

- Historical Internet Address Resources registered in Inter-NIC
- Make historical Resources be managed by the appropriate IRs

□ ERX history in APNIC

- Transfer from ARIN to APNIC begun in 2002
- All transfer from ARIN to APNIC already finished
 - IPv4 addresses, ASNs

□ ERX process for KRNIC

- KRNIC contact the ERX resource holder
- Explain about ERX to the holder
- Submit a transfer request and holder's agreement for each holder
- APNIC confirm the transfer
- KRNIC maintain the transferred historical resources

ERX status in KRNIC

□ ERX resources in KRNIC

- IPv4 addresses : 51 /16, 40 /24
- ASN : 36

□ ERX history in KRNIC

- KRNIC had checked ERX resources's records using KRNIC member's routing table since 2001
- KRNIC begun to cooperate APNIC ERX project in 2003
 - KRNIC had look up the ip address information with 'kr' country code in ARIN Database
- KRNIC finished the transfer including 21(58%) ASN, 44(86%) /16 IPv4 addresses so far

Problems doing ERX in KRNIC

□ Fairness & Balance

- There are two kinds of big complaint
 - ERX resource holders : they don't want to be bothered
 - Current resource holders : they don't want to share the cost for IRM

□ If a ERX resource holder want to transfer to one of KRNIC member through KRNIC,

- Is it possible for the KRNIC member to be upgraded their member tier by the transfer?
- If so, do you expect there will be a ERX resource holder who want to transfer?

What is your circumstance?

- Do you know all ERX address in your country or members?
- Have you been doing ERX project for your country or members?
- Is there a complain?
 - If the answer is yes, what the complain is?
- Will you make a specific policy for ERX resources or apply the current policy?

Thank you !
